FOREST AND PEOPLE: FROM SKYVIEW TO LOCAL DYNAMICS

Interdisciplinary workshop

8th – 13th June 2025

CAES du CNRS - Centre Paul Langevin - 24 rue du Coin - 73500 Aussois

This interdisciplinary workshop brings together researchers from economics, human geography and remote sensing around a common research object, namely forests around the world with a special focus on developing countries. The workshop combines standard presentations with open slots to foster discussions on the drivers of forest cover change. From the global to the micro scale, the workshop emphasizes the importance of measurement and the complexity of human behavior in relation to the environment. The workshop will put public policy in the spotlight by, among other things, discussing their effectiveness in reducing forest cover loss, by shedding light on potential spatial or temporal spillovers, or by questioning the appropriate scale and duration of public intervention.

Keynote speakers

Jennifer Alix-Garcia (Oregon State University)

Jérôme Chave (CRBE, CNRS)

Eric Lambin (UCLouvain, Stanford University)

Paul Robbins (University of Wisconsin-Madison)

CHAIR
Opening Economics
